70s SR Bass Pickups

4 Conductor Lead Wire Series and Parallel Wiring Diagram

Series wiring offers a fuller and smoother sound with more output, like the feel of other humbucker designs. The parallel wiring is closer to how the original StingRay pickups were wired, and offers a tighter, punchier response reminiscent of a single coil (but still hum-canceling) that works well with an external preamp for further EQ shaping.

Parallel

Traditional StingRay Humbucker Wiring

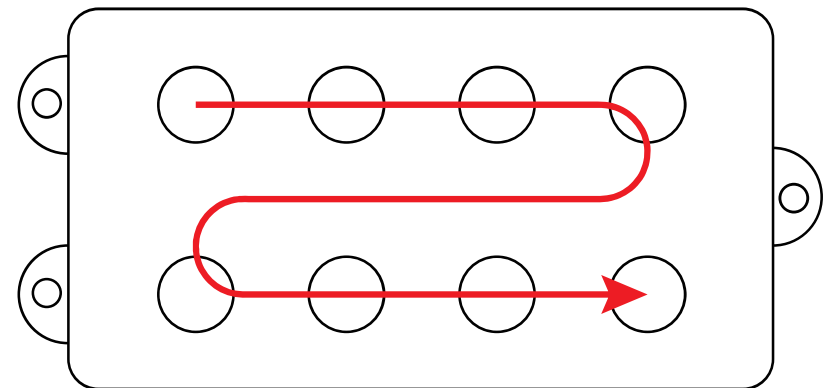

Four Conductor Lead Wire Color Coding

- Black and Red tied together - Hot
- White, Green, and Bare wire tied together - Ground
