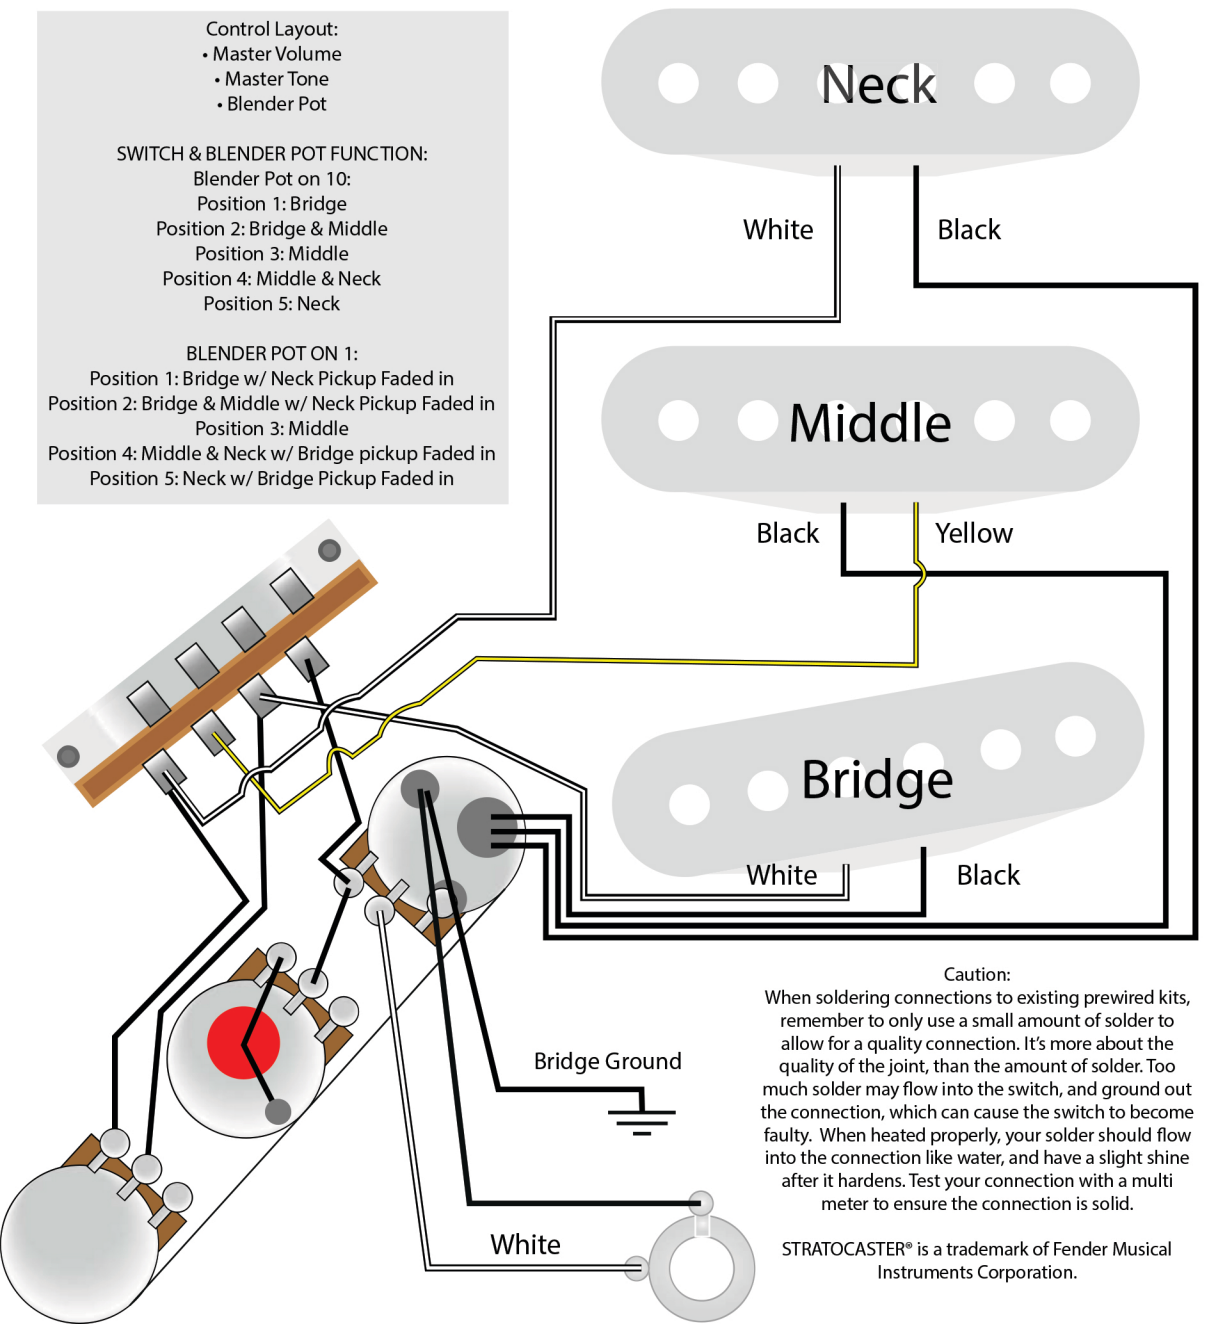
Position 2: Bridge & Middle w/ Neck Pickup Faded in
Position 3: Middle
Position 4: Middle & Neck w/ Bridge pickup Faded in
Position 5: Neck w/ Bridge Pickup Faded in



Caution:
When soldering connections to existing prewired kits, remember to only use a small amount of solder to allow for a quality connection. It's more about the quality of the joint, than the amount of solder. Too much solder may flow into the switch, and ground out the connection, which can cause the switch to become faulty. When heated properly, your solder should flow into the connection like water, and have a slight shine after it hardens. Test your connection with a multi meter to ensure the connection is solid.
